### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 4, line 1, "1" has been changed to "3".

### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the claims are allowable over the prior art of record because the prior art fails to show or suggest, either singly or in combination thereof, a head support device having an upper portion including a front center section which has a backwardly extending curve and surrounded by a front left widened portion to one side of the front center section and a symmetrical front right widened portion at the opposite side of the front center section, the front center section fitting behind the lower back part of the user's head and curved to match the occupant, the front left widened portion and the front right widened portion respectively fitting behind the user's left and right ears so that the front left widened portion is desired to match the mastoid bone behind the left ear and the front right widened portion is desired to match the right mastoid bone behind the right ear; a front neck portion in which the front left widened portion and the front right widened portion curve inwardly toward each

other as they extend downwardly on the device while the front center section curves forwardly in a convex shape between the inwardly curving front left and right

widened portions, the front neck portion designed to support the lordotic curve of the user's cervical spine; and a front lower section having a concave central portion extending below the front convex center section of the front neck portion and a front flat lower area extending below the concave center portion and extending to the left and right side of the first lower section, the first lower section designed to abut against the upper thoracic portion of the user's spine, the device terminating in a front lower central tip which is desired to fit behind the middle of the user's back between the user's shoulder blades.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
